Special Seminar
Genetic Traits Detection Platform
Sarel Ashkenazi, CEO, Seed-X, Israel
January 30   4:00 pm   3001 Plant and Environmental Sciences

Using artificial intelligence, Seed-X's technology detects genetic traits from the seed phenotypical appearance to reduce breeding time and costs.

Seed by Seed (SBS) sorting for genetic purity could accelerate breeding and enable new quality standards for seeds, nuts and foods.
